Mega Torque EX

High Jumping Torque

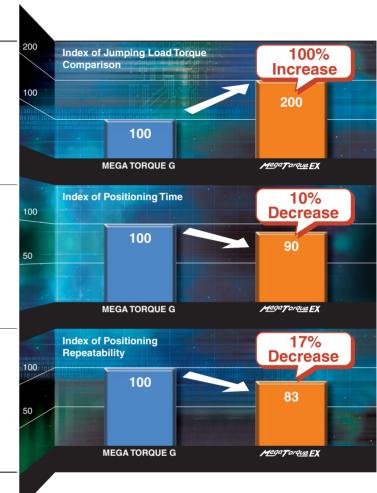

Adopting an ultrahigh-modulus special cord, it has a high jumping torque and prevents tooth jumping at quick acceleration and slowdown.

High-damping Property

Adopting an ultrahigh-modulus special cord, it has a high-damping torque and reduces the convergence time of belt vibration. Thus, also reducing positioning time.

High Positioning Repeatability

With its small belt elongation and use of an anti backlash special pulley, positioning accuracy and positioning repeatability are significantly improved. X A dedicated pulley required.

THE BEST APPLICATION AND EFFECTS

Linear drive application

Speed-up of conveyance Increase in conveyance amount

Speed-up of system

Stoppage at a specific target position

Time reduction for positioning

Robot arm

Reduction of robot arm vibration

Speed-up of system

Stoppage at a specific target position

Time reduction for arm stoppage

Construction Material Rubber High hardness synthetic rubber Cord Ultrahigh-modulus special material Fabric Advanced abrasion-resistant nylon fabric Pulley tooth profile Anti backlash special pulley profile Cord: Ultrahigh-modulus special material Rubber: High hardness synthetic rubber Fabric: Advanced abrasion-resistant nylon fabric: Advanced abrasion-resistant nylon

Mega Torque GII

High Power Transmission Capacity

New material for cord reduces belt elongation, thus allowing high-load transmission. Since the power transmission capacity increases 50% compared to MEGA TORQUE G, it allows a compact design.

Long Service Life

By using abrasion resistant and low friction processed fabric, durability under high-load condition has been improved. Therefore, use of Mega Torque GII, which has twice as much durability as MEGA TORQUE G, reduces the replacement frequency.

Low Operating Noise

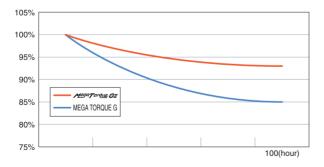

It reduces the operating noise about 18% when tested under the same condition by narrowing the belt width, using a special pulley and increasing the power transmission capacity.

A dedicated pulley required.

^{*} Mega Torque EX and Mega Torque GII require a dedicated pulley NOT compatible with other pulley designs.

^{*}When making a belt selection, contact our company.

MITSUBOSHI BELTING LTD.

Safety Precautions

Please read all the warnings!

Please take all necessary precautions when using our products. Also, please review relevant product catalog and design documents, etc.

Danger

- If you expect that a belt will fail and idle, free-run, or stop the system, thus causing a fatal or severe accident, please provide
- Do not use a belt as a lifting or towing tool.

Warning

 If you expect that static electricity will come from the power transmission belt system, thus causing fire or malfunction of the controller, set a neutralization apparatus in the system.

Caution

- Do not use a belt as an insulator. Contact us for information on insulation properties, which vary in belt type.
- For a belt that touches food directly, use one that complies with the applicable food hygiene law of your country
- Do not modify a belt, or its quality and performance could deteriorate.

Function & Performance

Caution

- Do not use a belt beyond its capacity or for an application other than that specified by the catalog, design documents, etc. This can cause premature failure of the belt
- If water, oil, chemical, paint, dust, etc. sticks to a belt or pulley, its power transmission could deteriorate and the belt may fail.
- A synchronous (toothed) belt makes louder noise during high-speed rotation. If this occurs, use a soundproof cover.

Storage & Transportation

Warning

• To store a heavy belt, use a suitable jig or stopper to prevent accidents such as belt toppling or tumbling.

Caution

- Use suitable equipment to carry/handle a heavy belt or pulley. Otherwise, back injury may result.
- Do not put weight on or bend a belt forcibly to carry or store it. Otherwise, it will produce defects or scratches to the belt, resulting in damage
- Store the belt in low humidity and a temperature range of -10°C to 40°C. Do not expose belts to direct sunlight.

Mounting & Operation

Danger

- Install a safety cover over rotating components including belt and pulley. Otherwise, hair, gloves and clothing can become entangled in the belt or pulley. If a belt or pulley breaks, fragments may cause injuries.
- Take the following precautions to maintain, inspect and replace a belt.
 - 1) Turn off power and wait until the belt and pulley have stopped completely.
 - 2) Secure machinery so that it may not move during belt removal
 - 3)Use caution: Do not unintentionally turn on power.
- Use the same type of belts or pulleys per OEM specification. Use of a different type may cause premature failure.
- Misalignment of the pulleys can damage the belt and result in flange failure. Make proper adjustments to system.
- Loosen the belt tension when changing belts. Do not force or stretch a belt over the flange. Do not use a screw driver or other sharp objects into when replacing the belt as this will result in damage.

- Apply the appropriate belt tension as specified by the relevant catalog and design documents, etc. Inappropriate tension could
- result in damage of the belt and shaft.
- Take the following precautions to modify the pulley in use: 1) Remove burrs and maintain proper pulley angle;

3) Maintain the pulley strength after modification.

- 2) Secure accurate dimensions after modification;
- Before assembling the flange with the pulley, check for foreign materials between the pulley and flange. Fasten the flange with a caulking tool and so on. Inappropriate installation could result in the flange coming off.

Handling of Used items

Caution

• Do not burn belt, or hazardous gas could be produced.
